INVENTORY OPTIMIZATION SERVICE FOR POINT OF CARE

Leverage Inventory Visibility to Enhance Operational Efficiency

As hospitals and health systems merge and grow, managing medication inventory across an extensive array of automated dispensing cabinets (ADCs) can be challenging, especially considering ongoing labor shortages. The increased device load can exacerbate issues managing stockouts, restocks, and excess inventory, increasing medication costs while diverting clinical focus away from patient care.

Omnicell's Inventory Optimization Service for Point of Care (POC) provides the visibility, insights, and workflow tools to simplify the management of ADC inventory, giving your staff more time to focus on high-value clinical activities. This cloud-based intelligence solution leverages predictive and prescriptive analytics to identify and address potential inventory issues, optimize operational efficiency, and benchmark performance against peers.

Powerful Dashboards and Workflow Tools

Inventory Optimization Service for POC provides one place to discover and act on improvement opportunities. Data-driven dashboards deliver real-time recommendations for optimizing cabinet inventory, allowing pharmacy leaders to better predict issues and prioritize action. Workflow tools make changes easy to implement, streamlining strategies that reduce dead stock, improve restock efficiency, minimize stockouts, and right-size cabinet inventory.

Defining. Delivering. Outcomes.

More than 8 out of every 10 facilities with ADCs use their cabinets as the primary means of drug dispensing.

PP&P State of Pharmacy Automation, 2023

Take Action with Enhanced ADC Inventory Insights

With Omnicell's Inventory Optimization Service for POC, you can:

- Discover opportunities to reduce excess inventory in your ADCs
- Easily see soon-to-expire medications
- Locate a medication across the health system to avoid last minute, potentially expensive reorders
- View stockout rates across the health system and optimize issue-to-restock ratio
- Enhance inventory visibility with the ability to view bin type, bin max, and bin capacity
- Compare your stockout and override rates against other hospitals in your network or similar U.S. hospitals
- Track a site's performance across identified KPIs
- Receive recommendations for optimal cabinet stock levels and reorder points

Service and Support that Drives Value

Omnicell's Inventory Optimization Service for POC provides actionable insights that increase operational efficiency and reduce medication costs. In partnership with a clinical strategist, you'll set goals for medication inventory management and work together to measure your progress and ensure ongoing outcomes. Their guidance will help you identify best practices, monitor performance, and make adjustments to achieve your unique goals and objectives.
