Committed to Your Success

Your goals are unique and evolving. At the heart of each Performance Center customer engagement is a tailored approach based on a deep understanding of your organization’s goals. Partnering with Performance Center can include strategies to:

- Reduce inventory spend
- Minimize strategic purchase decisions
- Manage shortage and expiration risk
- Centralize services (inventory, packaging, compounding)
- Leverage medication use analytics for cost/benefit evaluation of different courses of therapy
- Identify diversion activity with actionable intelligence
- Supply regulatory compliance for shared inventory, including 340B, DSCSA, and controlled substance management
- Standardize workflows and processes across the health system

We See Your Performance Optimized.
Transforming Medication Management

As the healthcare landscape continues to change, pharmacy operations must evolve to keep pace. Managing medications across an increasingly complex health system is both difficult and expensive, and it often detracts from focusing on more clinically driven initiatives. Simply put, your pharmacy team is left spending too much time managing medication and not enough time with patients.

At Omnicell, we’re transforming the way we help you meet these challenges. The Performance Center helps improve business and patient outcomes by combining a cloud-based predictive intelligence platform with ongoing optimization services.

Define Goals

At the heart of each Performance Center engagement is a tailored approach based on a deep understanding of your organization’s goals and focus areas for improvement. Together, we prioritize a list of goals, prioritized by complexity versus value and deliver ongoing recommendations to help you drive improved performance over time.

Analyze Data

The team will analyze your data across all facilities and devices to find opportunities for improvement, help you prioritize facilities and devices in which inventory should be tracked and monitored, and provide monthly tracking on overall inventory visibility.

Deliver Actionable Opportunities

Omnicell believes in working with our partners to deliver incremental opportunities that they can act on quickly. The Performance Center optimization team is there for you along the way, sourcing all opportunities constantly such as:

- Determining optimal min, max, and reorder points across facilities and devices
- Pinpointing optimal times for restocks to avoid conflict with clinical activities
- Finding slow-moving medications to transfer to higher-volume locations

Measure Results

We help you track your progress and savings over time with a customized web-based scorecard that tracks cumulative savings achieved.
