

Omnnicell Essentials

Get More from Your OmniCenter Devices

The key to solving medication management challenges starts with data visibility. The Omnicell automation you've invested in generates vast amounts of data – but how can you easily access it? Omnicell Essentials gives you the visibility you need to gain a clearer understanding of pharmacy inventory. With insightful data you can make better decisions about actions to take.

Available at no additional cost with Omnicell® XT Automated Dispensing Cabinets, Essentials provides visibility into cabinet inventory and potential indicators of drug misuse across Omnicell devices. The insight you gain from the cloud-based Essentials dashboard can help you:

- Right-size overall inventory levels
- Manage medication expiration
- Strategize on use of high-value items
- Identify compliance issues that may indicate drug diversion

By harnessing data from our automation solutions, Omnicell supports your journey to a more Autonomous Pharmacy. Easier access to data means smarter decisions and stronger results.

See Medication Inventory Like Never Before

Improve your view of OmniCenter®-based inventory all in one place. Easy-to-use dashboards provide visibility into current inventory levels and help you assess how much medication is at risk of expiring, and the value of that inventory. With Essentials you can:

- Balance cabinet inventory needs specific to patient care areas
- Adjust item par levels in each cabinet to reduce excess inventory
- Identify medication at risk of expiring to minimize waste
- View inventory value based on item wholesale acquisition cost (WAC)

Compliance Visibility Supports Your Diversion Program

Monitoring controlled substances is a priority for your health system. Essentials analyzes OmniCenter data to help identify potential diversion activity. The Compliance Visibility feature surfaces potential issues, such as healthcare workers who are not following proper medication dispensing and handling practices.

The Essentials dashboard provides near real-time visibility into controlled substances across all OmniCenter devices to identify:

- Excessive users who are dispensing far more controlled substances than their peers
- Return bin discrepancies
- Staff who have unresolved discrepancies due to poor documentation

With this increased visibility, pharmacy leaders and nurse managers can move quickly to resolve discrepancies, open diversion investigations, or provide additional training on compliance procedures.

“ The Essentials dashboard really helps us to focus on where we need to spend our time. You just don't get that with a report.”

- John Rossi, Director of Pharmacy, Mount Nittany Medical Center

Take Your Pharmacy Operations to the Next Level with Omnicell One

Omicell One™ is our technology-enabled service that delivers visibility, insights, and workflow tools to help you achieve even greater pharmacy performance.

Omicell One leverages predictive and prescriptive analytics through a cloud data platform that consolidates information across the medication management process, providing recommendations for inventory management to reduce waste and control spend. Omnicell One surfaces suggestions and empowers you to assign those tasks and monitor their closure via closed loop workflows.
