

Expand Communication Options with Omnicell Voice Technology Services

The demand for voice assistant devices is growing rapidly—an estimated 275 million devices will be used in homes by 2023.¹ Omnicell helps you keep pace with shifting communication modes by offering Voice Technology Services. This solution allows patients to connect to your pharmacy through their personal voice assistant device. Your patients can conveniently manage prescription refills and set medication dose reminders with simple voice commands.

- Flexibility to accommodate changing patient communication preferences
- Streamlines pharmacy workflow
- Provides an easy avenue for patients to refill their medications
- Supports adherence to medication regimens, helping improve health outcomes

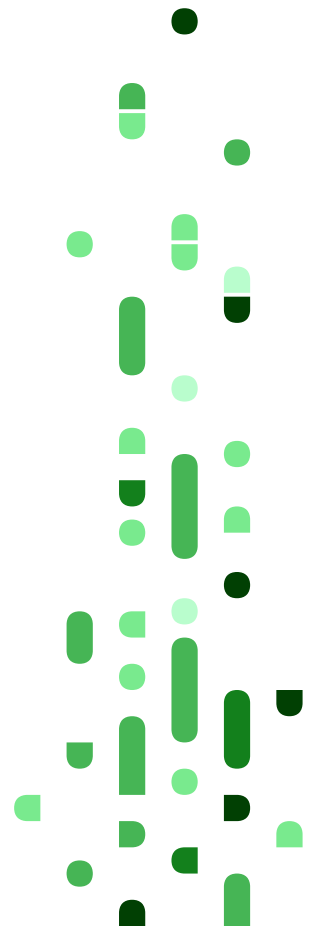

275
million devices

There will be **275 million voice assistant devices** used in homes by 2023.

¹ Juniper Research: Voice Assistants Used in Smart Homes to Grow 1,000%, Reaching 275 Million by 2023, as Alexa Leads the Way. MarketWatch. June 25, 2018.

Expand Your Communication Options

Voice Technology Services allow patients to manage prescriptions from home, facilitating effortless dialog with their voice assistant devices.

Refill Prescriptions

- Voice assistant will go through each prescription and ask patient if it should be refilled
- Patients can also request a particular refill using the Rx number
- Requested refills are automatically relayed to the pharmacy for efficient filling

Set Medication Dose Reminders

- Patients are prompted to schedule reminders for each of their active prescriptions
