Omnicell Medication Management Solutions and Interoperability Featured at HIMSS17 with Real World Application in Interoperability Showcase

Combination of Hardware, Technology, and Professional Services in Booth #4009 Demonstrates How Hospitals Can Help Improve Clinical and Financial Performance

MOUNTAIN VIEW, Calif., Feb. 13, 2017 /PRNewswire/ -- Omnicell, Inc. (NASDAQ: OMCL), a leading provider of medication and supply management solutions and adherence tools for healthcare systems and pharmacies, is pleased to showcase its recently enhanced portfolio at the HIMSS17 Conference & Exhibition, taking place February 19-23 in Orlando. Through the single-server Unity enterprise platform and interoperability with leading electronic health record (EHR) vendors, Omnicell is committed to streamlining clinical workflows while supporting the highest level of medication security and patient safety.

Hospitals continue facing countless challenges, including rising drug prices, reimbursement hurdles with value-based care initiatives, and determining how to best utilize “big data” that exists within their health system—all while continuing to make excellent patient care a top priority. As a result, the healthcare industry is increasingly interested in analytics tools as well as services that can help hospital leaders identify and prioritize areas of inefficiency within their systems. Omnicell has responded to these needs through new service and technology offerings introduced late last year that help healthcare providers navigate these challenges without placing undue burden on clinicians.

Omnicell's solutions can be seen in booth #4009 and will feature demonstrations of the interoperability between the Omnicell medication dispensing system and Cerner and Epic EHRs. This integration saves clinicians steps in medication workflow and helps promote safety. The Remote Medication Queuing solution streamlines the medication administration process for nursing, enabling more time for patient care. Closed Loop Dose Accountability helps minimize the risk of diversion while saving pharmacy and nursing time spent reconciling controlled substances.

Also featured in the booth will be the following:

- The XT Series Automated Dispensing System offers a high degree of flexibility to fit various medication distribution needs, and it can easily expand and scale as health systems grow. Compared to similar units on the market, Omnicell® XT Automated Dispensing Cabinets offer 50 percent more capacity for medication storage on hospital floors.
- Helping drive down costs and improve allocation of resources, the Performance Center combines leading inventory analytics software with a dedicated team of data scientists and professionals to drive improvements in pharmacy operations. Early adopters have seen a 20% average reduction in inventory levels and a 2% average savings in annual medication spend, freeing up valuable resources for other enterprise activities.
- Designed to help proactively detect drug diversion, Omnicell Analytics is a web-based analytics tool that streamlines the process of managing potential drug diversion across the health system, helping to improve patient care and safety.

Omnicell's interoperability with Epic will also be demonstrated in the Interoperability Showcase's Surgery & Recovery use case in booth #9000, Hall F. A nurse will issue an infusion order for a patient from the XT Automated Dispensing Cabinet and perform the reconciliation post administration. Omnicell's Closed Loop Dose Accountability will compare medications dispensed and/or wasted from the Omnicell cabinet versus the documented administration in the Epic EHR. This new integration automates manual tracking and increases vigilance of controlled substances, helping to prevent drug diversion.
"As we continue to transition to value-based care models, many hospital leaders are challenged to do more with less without compromising clinical care. Our goal is to enable health systems to gain the most potential from their technology investments as they balance these needs," said Joe Lynch, vice president, Marketing at Omnicell. "We’re excited to return to HIMSS and showcase the technology and services we offer our hospital and health system partners to tackle critical challenges."

About Omnicell

Since 1992, Omnicell (NASDAQ: OMCL) has been inspired to create safer and more efficient ways to manage medications and supplies across all care settings. As a leader in medication and supply dispensing automation, central pharmacy automation, IV robotics, analytics software, and medication adherence and packaging systems, Omnicell is focused on improving care across the entire healthcare continuum—from the acute care hospital setting, to post-acute skilled nursing and long-term care facilities, to the patient's home.

Over 4,000 customers worldwide use Omnicell® automation and analytics solutions to increase operational efficiency, reduce medication errors, deliver actionable intelligence and improve patient safety.

Omnicell's innovative medication adherence solutions, used by over 32,000 institutional and retail pharmacies in North America and the United Kingdom, are designed to improve patient adherence to prescriptions, helping to reduce costly hospital readmissions.

Recent Omnicell acquisitions, including Ateb, add distinct capabilities, particularly in central pharmacy, IV robotics, and pharmacy software, creating the broadest medication management product portfolio in the industry.
