

SERVERSCALE

A Flexible Server Subscription to Keep Your OmniCenter® Solution Current

Staying current with the latest on-premises OmniCenter operating systems is non-negotiable for optimal performance, scalability, and security in health system pharmacies and IT environments. An unsupported operating system could leave your institution open to a malicious software attack that could lead to unplanned downtime of your vital medication management solutions.

OmniceLL's ServerScale repackages the on-premises OmniCenter solution into a subscription format. Each subscription includes an OmniCenter **virtual** machine and supporting software, reinforced by connected device count protection.

This protection not only foresees your hospital's needs for growth but also preemptively places you on a larger server to avoid unexpected upgrades*. Experience continuity and security throughout the subscription term without the worry of surprise costs.

In addition, this forward-thinking offering removes the requirement for annual service renewals and protects against future service price increases.

*Excluding XL tier.

Features

- Larger server to avoid unexpected upgrades*
- Initially deployed on the latest Omnicell-validated Microsoft Window Server and OmniCenter software version
- 60-month subscription term with fixed payments
- Inclusion of service

*Not available for all device tiers. Restrictions may apply.

Benefits

- No surprise upgrade purchases needed over the course of the subscription due to device growth*
- Upgrading to the most recent version of OmniCenter enables access to enhanced features and functionality for your medication management solutions
- Minimizes upfront costs by eliminating the need for a large capital expenditure
- Simplified budgeting with fixed payments over the subscription term
- Eliminates the need to have an annual service renewal and the potential for an annual service price increase

Omnicell's core business of medication management solutions has earned Certified status for information security by HITRUST.
