**MEDTRACK - OR**

# Add the Power of RFID to Your XT Anesthesia Workstation

Scanning medication barcodes as drugs are used in the operating room is a best practice, but emergencies can often arise during surgical procedures that may prevent this. Though sometimes unavoidable, failure to scan a medication's barcode can impair the pharmacy's ability to maintain accurate device inventory, which could lead to stockouts that can jeopardize patient safety.

Omnicell aims to address this issue with MedTrack - OR, an RFID-enabled, single-deep drawer for the XT Anesthesia Workstation (AWS) that is engineered to seamlessly track non-controlled medications.

MedTrack - OR is designed to elevate the value of your existing AWS investment by helping the pharmacy achieve greater inventory accuracy without causing potential disruptions to provider workflow.

## A Grab-and-Go Experience for Providers

Your investment in XT AWS is meant to support the pharmacy's ability to view accurate inventory counts of controlled medications used in the OR. MedTrack - OR is designed to take this model a step further by allowing non-controlled medications to be automatically tracked when providers adopt a grab-and-go dispensing approach in response to patient emergencies. Once closed, this RFID-enabled drawer automatically updates inventory counts in OmniCenter, enabling providers to implement emergency workflows in high-pressure situations while maintaining inventory accuracy.

Defining. Delivering. Outcomes.

# Amplify Outcomes with MedTrack - OR

MedTrack - OR is designed to provide your health system with numerous benefits including:

### Reduced Stockouts or Overstock
Better item-level inventory visibility designed to prevent costly overstocks or stockouts that can disrupt patient care.

### More Efficient Restocking Process
Quickly identify what needs to be restocked and eliminate unnecessary trips to the OR to manually check medication inventory.

### Enhanced Patient Safety
Accurate item-level visibility into non-controlled medications is intended to ensure the pharmacy can restock promptly and providers have what they need.

### No Disruption to Provider Workflow
Seamlessly fits into existing AWS workflows by automatically tracking non-controlled medications— which should help providers stay focused on patient care without added steps or interruptions.

MedTrack - OR is under development and not yet generally available to Omnicell customers.
