

**MEDVISION**

# An Automated Solution for Clinic Inventory Management

Clinics are often areas where health systems lack visibility into medication inventory.

MedVision is a software solution designed to address this gap by creating virtual stockrooms for any clinic setting, including inpatient/acute care hospitals and outpatient clinics. The solution is intended to provide essential workflows and inventory management tools that help enable restocking from central pharmacies, as well as tasks like cycle counts, transfers, and inventory management in open-shelf configurations.

MedVision offers real-time clinic medication inventory data, accessible through dynamic dashboards, allows for insights into stockouts, stock values, usage, and key performance indicators (KPIs).

## Streamlining Clinic Inventory Management Workflows

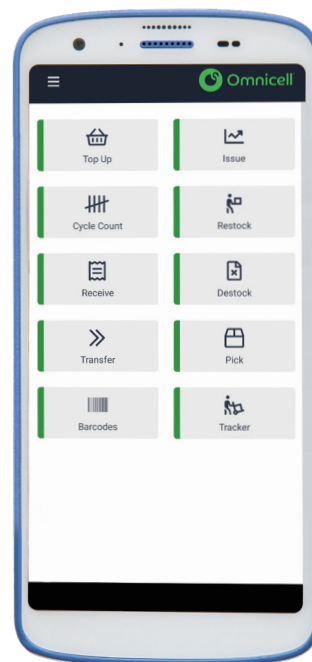

MedVision provides the following features:

### Clinic Medication Management

- Automatic reordering based on par and reorder levels
- Manual ordering for medications that don't have par and reorder levels
- One-step receiving and restocking
- Mobile device support for on-the-go inventory management

### Inventory Management

- Direct routing of clinic orders to central pharmacies or Centralized Services Centers (CSCs)
- Restocking from Central Pharmacy Manager (CPM) software
- Lot, serial, and expiration date tracking
- Comprehensive inventory management reporting

### Mobile and Scanning Capabilities

- Mobile medication inventory management
- Mobile smartphone scanner with hotspot Wi-Fi
- Support for select Android and Apple SE3 smartphones with barcode scanners

### Real-Time Reporting for Informed Decision Making

MedVision is designed to enable real-time reporting and visualizations that are intended to remove the administrative burden of running batch reports. Tailor your dashboard to highlight the critical data that matters most to you. Over 60 predefined reports are expected to be available, including inventory, usage, restock, serial/lot, and procurement reports. Direct integration with your hospital's central pharmacy automation system should streamline order placement, tracking, and receipt.

### Optional Integrations

- Optional integration with Epic MAR
- Optional vaccine management support
