

Omnicell AcuDose-Rx

FAST AND EASY ACCESS TO MEDICATIONS ON THE PATIENT FLOOR

Omnicell's AcuDose-Rx® automated medication dispensing cabinet helps nurses get the medications they need, when they need them.

With fast and easy access to medications on the patient floor, pharmacy has improved oversight of the medication-use process through real-time usage data that monitors the most important safety, security, and inventory factors.

- Supports increased accuracy and medication safety
- Reduces costly medication stockouts and diversion
- Optimizes medication inventory
- Allows pharmacy labor to be redeployed to clinical activities
- Features all-new design based on input from nursing/pharmacy staff

Flexible, easy-to-use dispensing cabinet

The AcuDose-Rx automated dispensing cabinet offers flexibility, capacity, and easy-to-use technology that gets nurses in and out faster while freeing pharmacy to support clinical activities. Inventory is optimized and automatically managed in ways that help minimize errors, improve missing medication rates, and reduce costly stockouts. AcuDose-Rx helps hospitals enhance patient care and safety, while improving speed, efficiency and accuracy in medication delivery.

Enables nurses to save their work

Interruptions can now be overcome with patent-pending technology. A first ever for unit-based cabinets, AcuDose-Rx allows nurses to save their work at the cabinet when their workflow is interrupted and then takes them back to the precise location where they left off, helping them to get back to patient care.

Provides fast and easy access

The new AcuDose-Rx was designed with input from thousands of nurses and pharmacy staff. Built on an intuitive workflow, the new user interface includes an instructional panel offering contextual information to the nurses as they perform tasks, reducing the need for training as well as calls to the pharmacy. AcuDose-Rx cabinets are quickly accessible through FastEntry™ Biometrics, a single-touch, secure logon that requires no secondary ID, password, or ID badge scan. The new thermal label printer and integrated medication bag drawer give nurses a safe, industry-compliant workflow that provides a receipt label on each medication bag. And, through cabinet-to-barcode medication administration, both nursing and pharmacy have an accurate record of when a patient's medications are dispensed from a cabinet to when they are administered.

Offers flexible and safe storage

AcuDose-Rx cabinets feature a wide variety of drawer sizes and storage pockets with three security levels. To support medication safety, only the selected storage pocket can be accessed during dispensing and restocking, helping to reduce picking errors; and barcoding scanning on restock keeps items stocked in their assigned locations. These enhanced safety features help to minimize medication errors at every step of the process.
