

How Can You Cut Through Data Clutter? Pandora Analytics

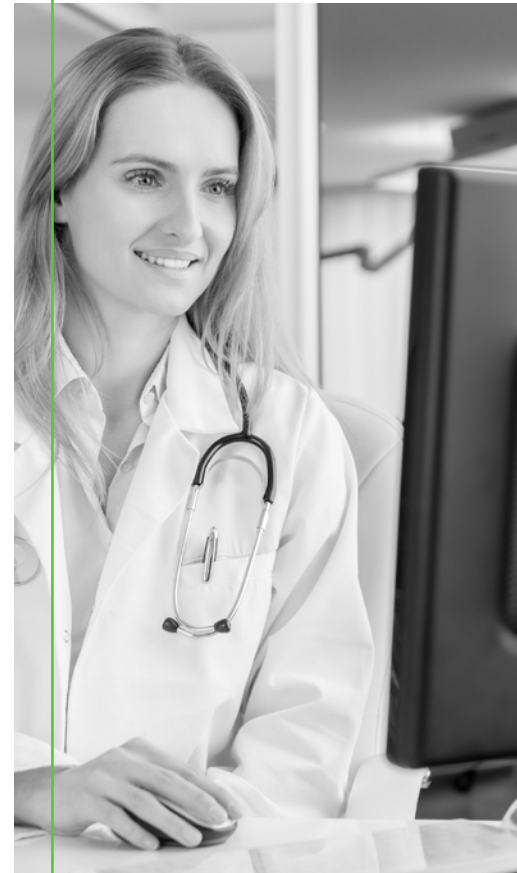

An abundance of data is available to address issues like diversion and inventory cost reduction, but translating that data into clear insights can be a monumental task.

Pandora® Analytics can do the work for you. Pandora extracts key data from your medication and supply dispensing systems and transforms it into a user-friendly interactive dashboard with at-a-glance views of key metrics and trends. Simply click to drill down to more detailed information.

More Effective Diversion Detection

Identifying a diverter can be challenging. You may spend hours a day sifting through reports in an attempt to spot anomalies. Pandora Analytics provides a faster, more effective way to detect diversion and ensure compliance with medication administration processes.

- Identify suspicious activity and assess improvement based on actions taken
- View data in the OR and procedural areas, which are at greater risk for diversion
- Easily track override activities, null/canceled transactions, and discrepancies

“ I have identified some diversion cases in as short a time as three days after the diversion started . . . The Pandora data allows me to drill down on any issue that I'm concerned about and identify exactly what's going on very quickly. ”

Kimberly New

Compliance Specialist
University of Tennessee Medical Center

Improve Inventory Management

With the mandate to drive down costs, making the right supply chain decisions is critical. Yet without visibility into usage and spending patterns, it's difficult to know what actions to take. Pandora allows you to see inventory data across your automation systems.

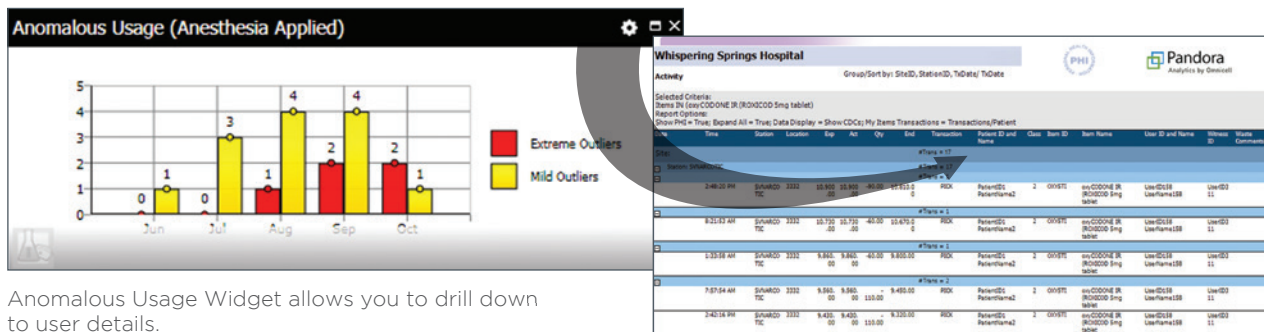

- Reduce costs by optimizing inventory levels
- Reduce inventory stockouts that affect patient care
- Easily identify shortage items
- Automate the process for implementing par levels¹

“Without the Pandora reporting system, it would be really difficult for us to track where the dollars are, so as an ROI, return on our investment, it's been a tremendous tool. It's worth its weight in gold.”

Daniel Nguyen
 Director of Pharmacy
 Oroville Hospital

Comprehensive, Customizable, and Secure

- Includes dashboard, task lists, alerts, and automated report scheduling
- Filters content for individual user's area of responsibility and allows modifications as roles change
- Operates on hospital-owned server, which ensures data stays within the healthcare facility

Anomalous Usage Widget allows you to drill down to user details.
