Omnicell delivers a new level of efficiency with the Remote Par Optimization (RPO) Module, part of our Pandora® Analytics solution. For health care facilities using Omnicell® automated medication and supply dispensing cabinets, the RPO Module streamlines the system for implementing par levels.

Now, from within the Pandora application, the par level recommendations can be sent directly to your Omnicell automated dispensing cabinets (ADCs), saving staff time:

- After reviewing and approving the recommended changes, send the new, optimized par levels directly to the ADC in a single step.
- No need to export the information to Excel, manipulate the data, and import it to the OmniCenter® server.
