

How Can Your Pharmacy More Efficiently Manage Medication Inventory?

Omnicell WorkflowRx Inventory Management Software

Omnicell® WorkflowRx™ Inventory Management Software is an intelligent perpetual inventory management system for the entire central pharmacy. WorkflowRx automates the ordering, receiving, stocking, and picking processes. This enables pharmacies to increase staff efficiency, automate inventory management, and ensure patient safety.

WorkflowRx captures detailed information, tracks all transactions, provides reporting on inventory adjustments, documents discrepancies, and verifies inventory counts to provide a complete audit trail for compliance.

The WorkflowRx central pharmacy automation solution uniquely combines the power of an inventory management carousel system with a barcode packaging system to accomplish complete pharmacy workflow integration.

Comprehensive Inventory Management

- Complete inventory management of the entire pharmacy formulary, including bulk storage, refrigerated cases, and IV room inventory
- Robust, integrated control of the carousel and packager
- Dynamic reordering of inventory based on historical usage, with electronic interfaces to commonly used distributors
- Customizable medication order routing logic enables the pharmacy to run more efficiently

Integrate with Pharmacy Carousel

The Omnicell Pharmacy Carousel is an automated pharmacy retrieval system that enables hospital pharmacies to manage medication inventory in the central pharmacy, reducing medication errors, streamlining workflow for greater efficiency, and improving control. The carousel leverages vertical height to create greater storage capacity, an advantage for pharmacies with limited space.

Driven by WorkflowRx software, the carousel is consistently ranked by KLAS—an independent healthcare research firm—as the Category Leader in the Medication Carousels segment.¹

Integrate with Medication Packager

Omnicell barcode packaging systems enable pharmacists to improve dispensing accuracy, increase productivity, and lower overall costs.

- High-speed unit-dose dispensing system with full barcode support
- Prevents accumulation of returned inventory
- Supports bedside medication administration verification
