

## Omnicell Medication Automation Training

Using the proven train-the-trainer model, Omnicell provides intensive training to a group of nurse educators or core nurse users at your facility.

### Nurse Preceptor Training Program

Omnicell's Medication Automation Nurse Training Program offers an effective and sustainable approach to training. The program will quickly equip nurses with the practical skills and knowledge they need to help make optimum use of your Omnicell® systems.

### Training From Trusted Experts

Using the proven train-the-trainer model, Omnicell provides intensive training to a group of nurse educators or core nurse users at your facility. This key group will acquire expertise in system operation and also receive coaching in how to train others.

As a result, you benefit from having an expert group of trainers available to deliver ongoing education as needed. New staff can quickly become skilled in product operation.

### Why Train-the-Trainer?

Initial training sessions during product implementation often leave a gap. Not all nurses are able to attend the sessions due to scheduling, vacations, or other challenges. In addition, there are no provisions for training newly hired nurses due to staffing changes and turnover. The train-the-trainer model offers many advantages:

**Respected**—Peer training is often better accepted by nurses than training provided by outside parties.

**Adaptable**—Training can be more easily tailored to your institution's specific protocols and policies.

**Sustainable**—Product knowledge remains in the hands of the facility and is passed on to new nurses.

**Flexible**—Training can be provided when and where needed to support new hires and refresh knowledge for existing staff.

*"The training resources provided make it easy for us to sustain training as new nurses are hired. Because nurses can get most of their questions addressed by the nurse trainers, we had fewer calls than expected after the installation."*

**Ivette Ramus, RPh, CPh**  
Pharmacy Operations Manager  
**Martin Health System, Stuart, Florida**

*"I was very impressed with the quality of Omnicell's training staff—they were well-trained, seasoned, and many have worked in pharmacy."*

**Chris Newman**  
Director of Pharmacy  
**Archbold Memorial Hospital, Thomasville, Georgia**

*"When you teach something it really helps to make sure you understand it yourself. Our super user trainers are really competent as a result."*

**Gwinette Alligood**  
Omnicell-Trained Nurse Preceptor  
**Archbold Memorial Hospital, Thomasville, Georgia**

## Program Format

The Medication Automation Nurse Preceptor Training Program can be adapted to meet the size and specific needs of any institution. The facility can start conducting training sessions, giving nursing staff greater flexibility to attend when it works for them.

Courses cover but are not limited to the following key topics:

- How to dispense, return, and waste medications
- Administrative functions such as adding or deleting staff users in the system
- Overview of reports available and how to access them

## Training Materials

Omnicell provides comprehensive training support materials, such as scripts and skills checklists, to aid the nurse trainers in delivering future training sessions.
